Task Summary

✖ Create an Alias (CNAME) record with a blank name pointing to CorpWeb.CorpNet.com [Hide Details](#)

- ☐ Make sure the record type is Alias (CNAME)
- ☐ Leave the name blank
- ☐ Use CorpWeb.CorpNet.com as the target host

✖ Create the intranet Alias (CNAME) record pointed to CorpWeb.CorpNet.com [Hide Details](#)

- ☐ Make sure the record type is Alias (CNAME)
- ☐ Use intranet as the record name
- ☐ Use CorpWeb.CorpNet.com as the target host

✖ Create the www Alias (CNAME) record pointed to CorpWeb.CorpNet.com [Hide Details](#)

- ☐ Make sure the record type is Alias (CNAME)
- ☐ Use www as the record name
- ☐ Use CorpWeb.CorpNet.com as the target host

Explanation

In this lab, you create CNAME (ALIAS) records in the sales.private domain using the following values:

ALIAS Name	Target Host (FQDN)
(leave blank)	CorpWeb.CorpNet.com
intranet	CorpWeb.CorpNet.com
www	CorpWeb.CorpNet.com

Complete the following steps:

1. In Hyper-V Manager, select **CORPSERVER**.
2. Right-click **CorpDC** and select **Connect**.
3. In Server Manager, select **Tools > DNS**.
4. Expand **CORPDC**.
5. Expand the **Forward Lookup Zones**.
6. Right-click the **sales.private** zone and select **New Alias (CNAME)**.
7. In the Alias name field, enter the *alias name* (to use the parent domain name for the alias, leave the field blank).
8. Enter the *fully qualified domain name* of the host.
9. Click **OK**.
10. Repeat steps 6-9 to create additional records.
