Task Summary

- ✔ Mirror the C: drive
- ✘ Create a RAID 5 volume [Hide Details](#)

+

Create the Data volume

-

Create the volume as a RAID 5 volume

-

Create a 2 TB volume

+

Assign drive letter R to the new drive

+

Format the volume with NTFS

Explanation

In this lab, you perform the following tasks:

- On Disk 1, create a mirrored volume of the System (C:) volume to add fault tolerance.
- Using Disk 2, Disk 3, and Disk 4, create a RAID 5 volume that provides both fault tolerance and improved performance using the following settings:
  - Volume size: **2 TB**
  - Drive letter: **R**
  - Format: **NTFS**
  - Volume label: **Data**

Complete this lab as follows:

- Mirror an existing volume as follows:
  - Right-click **Start** and select **Disk Management**.
  - Click **OK** to initialize new disks.
  - Maximize the Disk Management window to better view the volumes.
  - Right-click the **System (C:)** volume and select **Add Mirror**.
  - Select **Disk 1** that will be used for the mirrored copy.
  - Select **Add Mirror**.
  - Click **Yes** to convert the basic disk to a dynamic disk.
- Create a RAID 5 volume as follows:
  - In Disk Management, right-click a *disk* with free space and select **New RAID-5 Volume**.
  - Click **Next**.
  - Select **Disk 2**, **Disk 3**, and **Disk 4** to be part of the new volume; then select **Add**.
  - Click **Next**.
  - From the drive letter drop-down dialog, select **R**; then click **Next**.
  - Make sure that **NTFS** is selected as the file system.
  - In the Volume label field, enter **Data**.
  - Click **Next**.
  - Click **Finish** to create the volume.
  - Click **Yes** to convert the basic disk to a dynamic disk.
