

## 9.6.6 Mobile Email Configuration Facts

---

You can configure email accounts on your mobile device using email service providers. Well-known email providers include:

- Exchange
- Google/Inbox
- iCloud
- Outlook.com
- Yahoo

You can also add your email account and setup the IP addresses of your POP3, IMAP, or SMTP servers. To configure these email accounts, you may need to modify the port settings. To encrypt your email, configure the SSL and S/MIME settings. Both SSL and S/MIME securely sign and encrypt email to prove that the email actually came from the person claiming to be the sender.
