Task Summary

Actions you were required to perform:

- ✓ Clear the CMOS settings

Explanation

In this lab, your task is to clear the CMOS settings.

Complete this lab as follows:

1. Verify the problem as follows:
 - a. Click the **power button** on the computer.
After the BIOS loads, it prompts you for a password.
 - b. From the top navigation tabs, select **IT Administration** to return to the hardware view and clear the password.
 - c. Click the **power** button on the computer to turn the computer off.
 - d. Above the computer, select **Motherboard** to switch to the motherboard view of the computer.
2. Clear the CMOS settings as follows:
 - a. Select the **motherboard**.
 - b. In the Selected Component window, select **Details** for the motherboard.
 - c. Select the **Specifications** tab.
 - d. Read the documentation to identify the recommended procedure and the location of the component that clears the CMOS settings.
 - e. On the surge protector, drag the **power cable** connected to the computer and drop it on a clear area of the Workspace to unplug the computer.
 - f. On the motherboard, move the **CMOS battery** to the Shelf.
 - g. Move the **CMOS battery** back to its original position.
 - h. Select the **power cable**.
 - i. In the Selected Component window, drag the **unconnected end** to the surge protector.
 - j. Above the computer, select **Front** to switch to the front view of the computer.
 - k. Click the **power button** on the computer to turn the computer on.
 - l. Make sure the computer boots into Windows.
