## Individual Responses

▼ Question 1: Correct

Which of the following actions directly improves system security on a Windows workstation?

- ☐ Create regular restore points.
- ☐ Disable automatic reboot on error.
- ➡ ☒ Install the latest updates.
- ☐ Create a password reset disk.

## Explanation

Installing the latest updates directly improves system security.

Configuring restore points or password reset disks protect the system from failures and help you recover, but does not increase security.

▼ Question 2: Incorrect

Users have been experiencing periodic system lockups that generate the same error message. After checking Microsoft's website, you find that a hotfix is available to address the issue. What should you do next?

- ➡ ☐ Deploy the hotfix on a test computer.
- ☒ ~~Deploy the hotfix immediately on all company computers.~~
- ☐ Deploy the hotfix for users who have experienced problems.
- ☐ Wait until the next service pack comes out.

## Explanation

Before deploying a hotfix, you should test it to make sure that you can successfully apply the fix, that the fix corrects the problem, and that it does not cause other problems.

After it is tested, you should deploy the hotfix on all computers. Though the hotfix will be included in the next service pack, you should not wait until the service pack is released if you have problems that can be resolved by the hotfix.

▼ Question 3: Correct

Which of the following terms describes a Windows operating system patch that corrects a specific problem and is released on a short-term, periodic basis?

- ☐ Kernel fix kit

- ☐ Service pack
- ☐ Targeted software patch

➡ ☒ Hotfix

### Explanation

A hotfix is an operating system patch that corrects a specific known problem.

Service packs include a collection of hotfixes and other system updates. Service packs are not released as often, but contain all hotfixes released to that time.

#### ▼ Question 4: Incorrect

You want to make sure that you always have the latest patches installed on your workstation for an order entry application created by DataComLink corporation.

What should you do? (Select TWO.)

- ☐ Configure Windows Update to download updates for other Microsoft products when Windows is updated.
- ➡ ☐ Check the DataComLink Website regularly for patches and updates to the software.
- ➡ ☐ Configure the application to automatically download and install updates as they are released.
- ☒ ~~Configure Windows Update to download and install updates automatically.~~
- ☒ ~~Download any patches from the company as you are notified of them.~~

### Explanation

The best ways to make sure that an application is up to date include the following:

Manually check the manufacturer's website regularly for software updates.

Configure the application to automatically download and install updates as they are released.

Windows Update only works for Microsoft products and some critical driver files. It will not update third-party software. Most software companies do not contact you directly when updates are released.

#### ▼ Question 5: Correct

You would like to run an application on your Windows workstation every Monday at 3:00 p.m. Which tool would you use to configure the application to run automatically?

- ☐ Msconfig
- ☐ Startup folder
- ➡ ☒ Task Scheduler
- ☐ Services

### Explanation

The Task Scheduler is a tool that you can use to automatically start an application or run a script based on events. Triggers identify conditions that start the task. Triggers include day and time, logon, and system events. Common tasks that are scheduled to run at regular intervals include backups, system virus scans, and system updates.

Use the Services console to view and manage services on your computer. Use the Msconfig utility to customize the way the Windows system boots.

▼ Question 6: Incorrect

Recently, a Windows 10 update was automatically downloaded and installed on your Windows 10 system. After you install the update, your contact manager database application no longer works correctly. You want to uninstall the latest updates to see if the application starts working again.

Click the option you would use in the Settings app to do this.

## Choose how updates are installed

Automatic (recommended) ▼

Keep everything running smoothly. We'll restart your device automatically when you're not using it. Updates won't download over a metered connection (where charges may apply).

☐ Give me updates for other Microsoft products when I update Windows.

☐ Defer upgrades  
[Learn more](#)

[View your update history](#) ←

Choose how updates are delivered

## Get Insider Preview builds

Be one of the first to see future updates and improvements to Windows and provide feedback.

Get started

### Explanation

If you select the View Your Update History option in the Settings app, you can view a list of Windows updates that have been installed on your system. You also are presented with the option to uninstall an update.

▼ Question 7: Incorrect

You want to configure your Windows 10 workstation so that it can get Windows updates directly from other Windows 10 systems on the network that have already downloaded them from Microsoft.

Click the Settings app option you would use to do this.

## Choose how updates are installed

Automatic (recommended) ▼

Keep everything running smoothly. We'll restart your device automatically when you're not using it. Updates won't download over a metered connection (where charges may apply).

☐ Give me updates for other Microsoft products when I update Windows.☐ **Defer upgrades**  
[Learn more](#)[View your update history](#)**Choose how updates are delivered** 

## Get Insider Preview builds

Be one of the first to see future updates and improvements to Windows and provide feedback.

[Get started](#)

### Explanation

If you select the Choose How Updates are Delivered option in the Settings app, you can configure your system to get Windows update directly from Microsoft or from other workstations on the local network that have already download the updates your system needs. You can also configure your system to deliver updates to other Windows 10 systems.

#### ▼ Question 8: Correct

You work for a large company as the IT administrator. With the many external attacks being perpetrated in the form of security breaches being found in applications, you are concerned that your Windows 10 computers may be vulnerable. You also want to ensure that Windows is using the latest features.

Which of the following would BEST protect your computers?

- ☐ Scheduled backups
- ☐ Scheduled disk maintenance
-  ☒ **Windows updates**
- ☐ Antivirus updates

### Explanation

By default, Windows 10 PCs automatically check for updates and install any updates it finds. Although this function can be disabled, Microsoft strongly encourages the use of automatic updates to find and install Windows update as well as to keep the computers up to date with the latest features. These updates often include patches to fix security issues found in applications. Automatic maintenance can be used to perform these checks.

Scheduled backups are important to have and would be useful when a computer has a virus or the computer has been ransomed. They do not, however, keep the computer safe from application security leaks or update Windows with the latest features.

Scheduled disk maintenance allows the system to diagnose and repair disk errors. It does not back up files.

Antivirus software and updates are important when trying to protect your computer from viruses. However, addition steps should be taken to ensure that security leaks in applications are fixed. In addition, antivirus software does not update Windows with the latest features.
