

Lab Report

Your Performance

Your Score: 4 of 4 (100%)

Elapsed Time: 1 minute 5 seconds

Pass Status: Pass

Required Score: 100%

Task Summary

Actions you were required to perform:

- ✓ Turn Windows Firewall On
- ✓ Allow Key Management Service through the firewall
- ✓ Allow the Arch98 program through the firewall
- ✓ Allow the Apconf program through the firewall

Explanation

In this lab, your task is to configure the Windows Firewall as follows:

- Turn on the Windows Firewall for the Public network profile only.
- In addition to the programs and ports currently allowed, allow the following service and applications for the Public network profile:
 - Key Management Service
 - Arch98
 - Apconf

Complete this lab as follows:

1. Select **Start**.
2. Select **Settings**.
3. Maximize the window for easier viewing.
4. Select **Network & Internet**.
5. Select **Windows Firewall**.
6. In the left pane, select **Turn Windows Firewall on or off** to enable the firewall.
7. Under Public network settings, select **Turn on Windows Firewall**.
8. Click **OK**.
9. In the left pane, select **Allow an app or feature through Windows Firewall** to allow a program through the firewall.
10. Select **Change settings**.
11. For the Key Management Service, select the **box** in the Public column.
12. Select **Allow another app** to configure an exception for an uncommon program.
13. Select the **program** from the list.
14. Select **Add**.
15. For the program you just added, make sure the **box** in the Public column is selected.
16. For the program you just added, unmark the **box** in the Domain column.
17. Repeat steps 12-16 for additional programs.
18. Click **OK**.
