## Lab Report

## **Your Performance**

Your Score: 4 of 4 (100%)

Pass Status: Pass
Elapsed Time: 32 minutes 6 seconds

Required Score: 100%

## **Task Summary**

Actions you were required to perform:

- ✓ Disable system-managed paging file settings
- ✓ Delete the paging file on the C: drive
- ✓ Create a custom paging file on the D: drive
- ✓ Reboot to apply the changes and wait for it to finish restarting

## **Explanation**

In this lab, your task is to complete the following:

- Disable system-managed paging file settings.
- Delete the paging file on the C: drive.
- Create a paging file on the D: drive using the following settings:
  - Initial size: **2048**
  - Maximum size: 3072
- Reboot to apply the changes.

Complete this lab as follows:

- 1. Disable system-managed paging file settings as follows:
  - a. From the taskbar, open File Explorer.
  - b. Right-click **This PC** and select **Properties**.
  - c. Select Advanced system settings.
  - d. Under Performance, select **Settings**.
  - e. Select the **Advanced** tab.
  - f. Under Virtual Memory, select **Change**.
  - g. Unmark Automatically manage paging file size for all drives.
- 2. Delete the paging file on the C: drive as follows:
  - a. Under Drive [Volume Label], select **C:** [System].
  - b. Select **No paging file**.
  - c. Select Set.
  - d. Click Yes.
- 3. Create a paging file on the D: drive as follows:
  - a. Under Drive [Volume Label], select **D: [Data]**.
  - b. Select **Custom size** to manually configure the paging file settings.
  - c. In the Initial size field, enter 2048.
  - d. In the Maximum size field, enter 3072.
  - e. Select Set.
  - f. Click OK.
