Task Summary

X Create an exclusion range from 192.168.0.1 to 192.168.0.29

Explanation

Because all addresses that need to be excluded are in a contiguous ranges, you complete this task by creating an exclusion range. In this lab, create the exclusion on the Subnet1 subnet. Use 192.168.0.1 as the beginning address and 192.168.0.29 as the ending address of the exclusion.

Following are steps an expert might take to complete this lab:

- 1. From Hyper-V Manager, select **CORPSERVER**.
- 2. Expand the window to view all virtual machines.
- 3. Right-click the **CorpDCHP** server and select **Connect**.
- 4. From Server Manager, select **Tools** > **DHCP**.
- 5. In the left pane, expand the **CorpDHCP.CorpNet.com**.
- 6. Expand the **IPv4** protocol.
- 7. Expand the **Scope** folder.
- 8. Right-click the **Address Pool** node and select **New Exclusion Range**.
- 9. In the Start IP address field, enter the *starting IP address*.
- 10. In the End IP address field, enter the ending IP address.
- 11. Click Add.
- 12. Click **Close** to close the Add Exclusion Range dialog.
