▼ **Question 1:**   <u>Correct</u>

Which printer management components would you use to view the port a printer uses? (Select TWO.)

☐ Print spooling service

➡ ☑ Printer properties

➡ ☑ Print server properties

☐ Print queue

☐ Print queue properties

Explanation

Use the print server properties or the printer properties to view the port used by a printer. Print server properties displays printer ports used on the computer. The printer properties displays the port for the individual printer, as well as all printer ports for the computer. The Print Spooling service is a software process that captures print jobs from applications, places them in the print queue, and then sends each print job to the print device. The print queue is a location on the hard disk that holds print jobs waiting to be processed.

▼ **Question 2:**   <u>Correct</u>

Which printer management component would you use to view the drivers used by a printer?

◯ Print server properties

➡ ⦿ Printer properties

◯ Print spooling service

◯ Print queue

Explanation

View the printer properties to see the drivers used by a printer. You can also use the printer properties to view the port used by a printer, manage user permissions, and configure color management profiles.

Use the print server properties to view all printer ports used on the computer. This function can also be used to view the print drivers used on the system, including drivers required by network users, notifications, and the spooler location.

The Print spooling service is a software process that captures print jobs from applications, places them in

the print queue, and then sends each print job to the print device. The print queue is a location on the hard disk that holds print jobs waiting to be processed.

▼ **Question 3:** <u>Correct</u>

Which printer permission would you assign to a user so that she can pause the printer?

➡ ◉ Manage this printer

○ Pause printers

○ Print

○ Manage documents

Explanation

Users with the Manage this printer permission can pause the printer and edit the printer properties, but cannot manage any documents waiting to be printed. Users with the Manage documents permission can manage all documents in the queue (pause, resume, delete, or rearrange the order). Users with the Print permission can print using the printer. The Pause printers permission does not exist.

▼ **Question 4:** <u>Incorrect</u>

You want to restrict the hours that the QA printer is available from Windows. Which tab on the Printer Properties page would you click so you can restrict the hours the printer is available?

Explanation

To configure when a printer is available, edit the settings on the Advanced tab on the Printer Properties page.

▼ **Question 5:** <u>Incorrect</u>

Your system administrator shared a USB laser printer connected to your Windows 10 system so other users on the network can send jobs to it. A network user has sent a large job to the printer, but the print job has stalled. You try to delete the print job, but can't.

Which of the following BEST describes the reason you cannot delete the print job?

○ You do not have the Manage network printers permission.

○

You do not have the Print permission.

~~You do not have the Manage this printer permission.~~

➡ ⭕ You do not have the Manage documents permission.

Explanation

In this case, you can't delete the print job because you don't have the Manage documents permission. Users who have the Manage documents permission can manage all documents in the queue (pause, resume, delete, or rearrange the order). Users with the Print permission can print using the printer and manage their own documents. Users with the Manage this printer permission can edit the printer properties and pause the printer, but cannot manage any documents waiting to be printed. The Manage network printers permission does not exist.
