Task Summary

✖ Add the File Server Resource Manager role service   Show Details

✖ Add the Services for Network File System role service   Show Details

Explanation

In this lab, you perform the following tasks:

- Add the File Server Resource Manager (FSRM) role service, which allows you to configure file screens to prevent users from saving specific file types in specific folders.
- Add the Server for NFS role service to be able to share files with UNIX-based clients.

Complete this lab as follows:

1. From Hyper-V Manager, select **CORPSERVER**.
2. Maximize the window to view all virtual machines.
3. Right-click **CorpFiles16** and select **Connect**.
4. From Server Manager, select **Manage** > **Add Roles and Features**.
5. In the Add Roles and Features Wizard, click **Next**.
6. Make sure **Role-based or feature-based installation** is selected; then click **Next**.
7. Make sure **CorpFiles16.CorpNet.com** is selected in the Server Pool area; then click **Next**.
8. Expand **File and Storage Services** > **File and iSCSI Services**.
9. Select the **File Server Resource Manager** role.
10. Select **Add Features**.
11. Under File and iSCSI Services, select the **Server for NFS** role.
12. Select **Add Features**.
13. Select **Next**.
14. On the Select features window, select **Next**.
15. Select **Install**.
16. When the installation is complete, select **Close**.
