Task Summary

✖ Create the root zone named . (a dot to represent the root zone)

✖ Create the root zone as a primary zone

✖ Do not allow dynamic updates

Explanation

In this lab, you perform following tasks:

- Create a root zone on PartnerServer.
- Create a primary forward lookup zone named **.** (a dot to represent the root zone).
- Do not allow dynamic updates.
- Verify that root hints are no longer configured on the server.

Complete this lab as follows:

1. In Server Manager, select **Tools** > **DNS**.
2. Expand **PARTNERSERVER**.
3. Right-click **Forward Lookup Zones** and select **New Zone**.
4. Click **Next**.
5. Make sure **Primary zone** is selected; then click **Next**.
6. Type **.** (a dot to represent the root zone) for the zone name; then select **Next**.
7. Make sure **Create a new file with this file name** is selected and click **Next**.
8. Make sure **Do not allow dynamic updates** is selected; then select **Next**.
9. Click **Finish** to complete the New Zone wizard.
10. Right-click the _DNS Server_ and select **Properties**.
11. Select the **Root Hints** tab.
12. Verify that there are no root hints; then select **OK**.
