✔ Modify the High Performance plan settingsHide Details

> ➕ When on battery, turn off the display after 5 minutes
> ➕ When on battery, sleep after 30 minutes
> ➕ When plugged in, turn off the display after 1 hour
> ➕ When plugged in, sleep after 5 hours
> ➕ Set the lid close action when plugged in to Do Nothing

Explanation

In this lab, your task is to complete the following:

- Set the following default settings for the power button action (all existing power plans):
  - On battery: **Hibernate**
  - Plugged in: **Shut down**
  - Require a password on wakeup.
- Set the computer to use a password on wakeup.
- Select the High Performance power plan.
- Modify the High Performance power plan settings as follows:

	On Battery	**Plugged In**
Turn off the display	5 minutes	1 hour
Put the computer to sleep	30 minutes	5 hours
When lid is closed	Sleep	Do nothing

Complete this lab as follows:

1. Set the default settings for the power button as follows:
   a. Select **Start**.
   b. Select **Settings**.
   c. Maximize the window for easier viewing.
   d. Select **System**.
   e. Select **Power & sleep**.
   f. Under Related settings, select **Additional power settings**.
   g. Maximize the window for easier viewing.

     h. In the Power Options window on the left, select **Choose what the power buttons do** to modify the power button behavior.

     i. From the When I press the power button drop-down list, select **Hibernate** for On battery.

     j. From the When I press the power button drop-down list, select **Shut down** for Plugged in.

2. Set the computer to use a password on wakeup as follows:

     a. Select **Change settings that are currently unavailable** to change the password protection settings.

     b. Under Password protection on wakeup, select **Require a password**.

     c. Select **Save Changes**.

3. Under Hide additional plans, select **High Performance**.

4. Modify the High Performance power plan settings as follows:

     a. Select **Change plan settings** next to High Performance.

     b. From the Turn off the display drop-down list, select **5 minutes** for On battery.

     c. From the Turn off the display drop-down list, select **1 hour** for Plugged in.

     d. From the Put the computer to sleep drop-down list, select **30 minutes** for On battery.

     e. From the Put the computer to sleep drop-down list, select **5 hour** for Plugged in.

     f. Select **Change advanced power settings** to modify the power plan advanced settings.

     g. Expand **Power buttons and lid**.

     h. Expand **Lid close action**.

     i. For On battery, make sure **Sleep** is selected.

     j. Select **Plugged in**.

     k. From the Plugged in drop-down list, select **Do nothing**.

     l. Click **OK**.

     m. Select **Save Changes**.
