▼ **Question 3:**   Correct

You have just set up a new laser printer for the company president on her Windows workstation. You have installed the printer and the drivers. What should you do next?

    ◯ Report to your supervisor that the job was completed.

➡ ◉ Edit the printer properties to configure device-specific settings.

    ◯ Share the printer over the network with the rest of the organization.

    ◯ Document the steps you took to complete the configuration.

Explanation

After installing a printer, you should configure device-specific settings before performing any further tasks. Documenting the steps you took to complete the configuration and reporting to your supervisor that the job was completed are good things to do, but not until after you have configured device-specific settings. Sharing the printer over the network is not required unless specified in the implementation plan or statement of work.

▼ **Question 5:**   Correct

Which of the following virtual printing options allows you to convert a Word document into a .jpg file?

    ◯ Print to XPS

    ◯ Print to PDF

    ◯ Print to File

➡ ◉ Print to Image

Explanation

Print to Image allows you to print any document into an image file that is independent of the application you use to view them. For example, you can convert a Word document into a .jpg file. The resulting images are print-ready and optimized for websites, smartphones, and tablets. You can also print them on a physical printer for excellent printouts.

Print to the XPS allows you to create .xps files using any program that you can print from in Windows. Use the Print to XPS Document Writer when you want to view, save, share, digitally sign, and protect your document's content. The Print to PDF feature allows you to print your document to PDF format. Print to File saves the formatting and layout information of your file so a printer can create the document without the program or computer that created it.
