Task Summary

✔ Change the default Admin username and password

✘ Enable Intrusion Detection

Explanation

In this lab, your task is to perform the following:

- Change the admin username and password for the Zone Director controller to the following:
    - Admin Name: *your choice*
    - Password: *your choice*
- Enable reporting of rogue devices for intrusion prevention.

Configure the security features on your wireless controller as follows:

1. Run a Security Evaluator report as follows:
    a. From the taskbar, open **Security Evaluator**.
    b. Next to Local Machine, select the **Target** icon to select a new target.
    c. Select **IPv4 Address**.
    d. Enter the *IP address* of the wireless access controller.
    e. Click **OK**.
    f. Select the **Status refresh icon** to run the security evaluation.
    g. Review the results to determine which issues you need to resolve on the wireless access controller.

2. Change the admin username and password as follows:
    a. From the taskbar, open **Internet Explorer**.
    b. Maximize Internet Explorer.
    c. Type **192.168.0.6** and press **Enter**.
    d. Enter the *admin name*.
    e. Enter the *password*.
    f. Select **Login**.
    g. From the top, select the **Administer** tab.
    h. Make sure **Authenticate using the admin name and password** is selected.
    i. In the Admin Name field, enter the *username* you choose.
    j. In the Current Password field, enter the **password**.
    k. In the New Password field, enter the *password* you choose.
    l. In the Confirm New Password field, enter the new *password*.
    m. On the right, click **Apply**.

3. Enable intrusion prevention as follows:
    a. Select the **Configure** tab.
    b. On the left, select **WIPS**.
    c. Under Intrusion Detection and Prevention, select **Enable report rogue devices**.
    d. Click **Apply**.

4. Re-run the security evaluator to confirm the remediation of reported vulnerabilities.
