Task Summary

❌ Configure SwitchA as the root bridge for VLAN 1

❌ Save the configuration changes on SwitchA

Explanation

In this lab, your task is to complete the following:

- Configure SwitchA to be the root bridge for VLAN 1.
- Save your changes to the startup-config file on each switch that has configuration changes.
- Each switch has the default spanning tree configuration. After the correct configuration is applied, SwitchA's Fa 0/1–3 interfaces will be in the designated state.

Complete this lab as follows:

1. Press **Enter**.
2. At the prompt, enter:

   SwitchA>**ena**
   SwitchA#**conf t**
   SwitchA(config)#**spanning-tree vlan 1 priority 4096**
   SwitchA(config)#**exit**
   SwitchA#**copy running-config startup-config**

3. Press **Enter**.
